

Feeling disconnected is one of the biggest issues in today's workplaces. Employees who quit often cite poor interpersonal relationships and a perceived lack of support as reasons for leaving. But when people feel connected and cared for, they stay motivated and productive.

Although conventional wisdom says socializing is for after-hours, science shows people work better in environments where they enjoy quality connections. They communicate well, understand each other, and are more likely to support one another — regardless of their differences.

That's why NLI created **CARE: The Neuroscience of Quality Connections**. This science-backed enterprise learning solution gives leaders and teams powerful tools to drive behavior change at scale. With **CARE**, every employee can become a quality connector.

Build a workplace culture that energizes people.

Through our science-based approach, **CARE** participants will:

- Learn to focus their attention where it's needed in the moment.
- Understand people's experiences more accurately by asking the right questions.
- Extend options to provide meaningful support to teammates.
